

## Interested in Research? Interested in Research?

The Schizophrenia Research Program invites you to join the Research Registry. Our goal is to gain greater understanding of what causes Schizophrenia, how it affects the lives of people living with the illness and how best to treat it. You may become part of achieving this goal.

As a registry member, you may be contacted by the registry coordinator two or three times a year about possible research projects. You may choose to accept or decline participation in the project at that time.

If you are interested in research participation and have Schizophrenia or Schizoaffective disorder, please contact the Registry Coordinator at 416-535-8501, Ext. 6177 for more information. Compensation is provided for registry-related visits.
